

8. Probability

Predicting player performance

Using the football fact sheets on pages 6-8, answer the following questions.

Yellow cards are issued to caution players. If a player is given two yellow cards during the same game then they automatically receive a red card and are required to leave the field.

1. What is the probability that Andrea Jonkheer receives a yellow card in a game?

$$2/18 = 1/9 = 0.111 = 11.1\%$$

2. What is the probability either Anna Slezák or Will Appleby receive a card in their next game?

Slezák = 3 cards in 20 matches
Appleby = 8 cards in 32 matches

$$((3/20) + (8/32)) = 2/5 = 0.4 = 40\%$$

3. If Peter Castle's red card was the result of receiving two yellow cards in a game, what is the probability that he receives at least one yellow card in the next game he plays?

Received yellow cards in 2 out of 37 matches (in one match he received two).

$$2/37 = 0.054 = 5.4\%$$

4. What is the probability that both Benjamin Lange and Andrea Jonkheer receive a card in their next game?

Lange = 6 cards in 36 matches = $1/6$
Jonkheer = 2 cards in 18 matches = $1/9$
 $((1/6) \times (1/9)) = 1/54 = 0.019 = 1.9\%$

5. What is the probability that when Lindsey Oakley shoots she scores?

$13/43 = 0.302 = 30.2\%$

6. Rank the midfielders based on the probability that their shots will successfully convert to goals.

1. Strobel = $9/9 = 1$
2. Lange = $18/31 = 0.58$
3. Okeke = $22/48 = 0.46$
4. Weber = $5/13 = 0.38$
5. Yoon = $17/45 = 0.38$
6. Marley = $0/4 = 0.00$

7. Rank the defenders based the probability that they will get a yellow card in their next game.

1. Appleby = $8/32 = 0.25$
2. Muñoz = $7/38 = 0.18$
3. Slezák = $3/20 = 0.15$
4. Jonkheer = $2/18 = 0.11$
5. Eaton = $3/32 = 0.09$
6. Obando = $0/17 = 0.00$

8. If Nathalie Strobel and Amari Okeke both took six shots in a game, how many goals would you expect them to score in total?

Strobel = $((9/12) \times 6) = 4.5 = 4$ goals
Okeke = $((22/48) \times 6) = 2.75 = 2$ goals
Total = 6 goals

9. In one of their next three games, what is the probability that Benjamin Lange and Lina Weber will both get a yellow card?

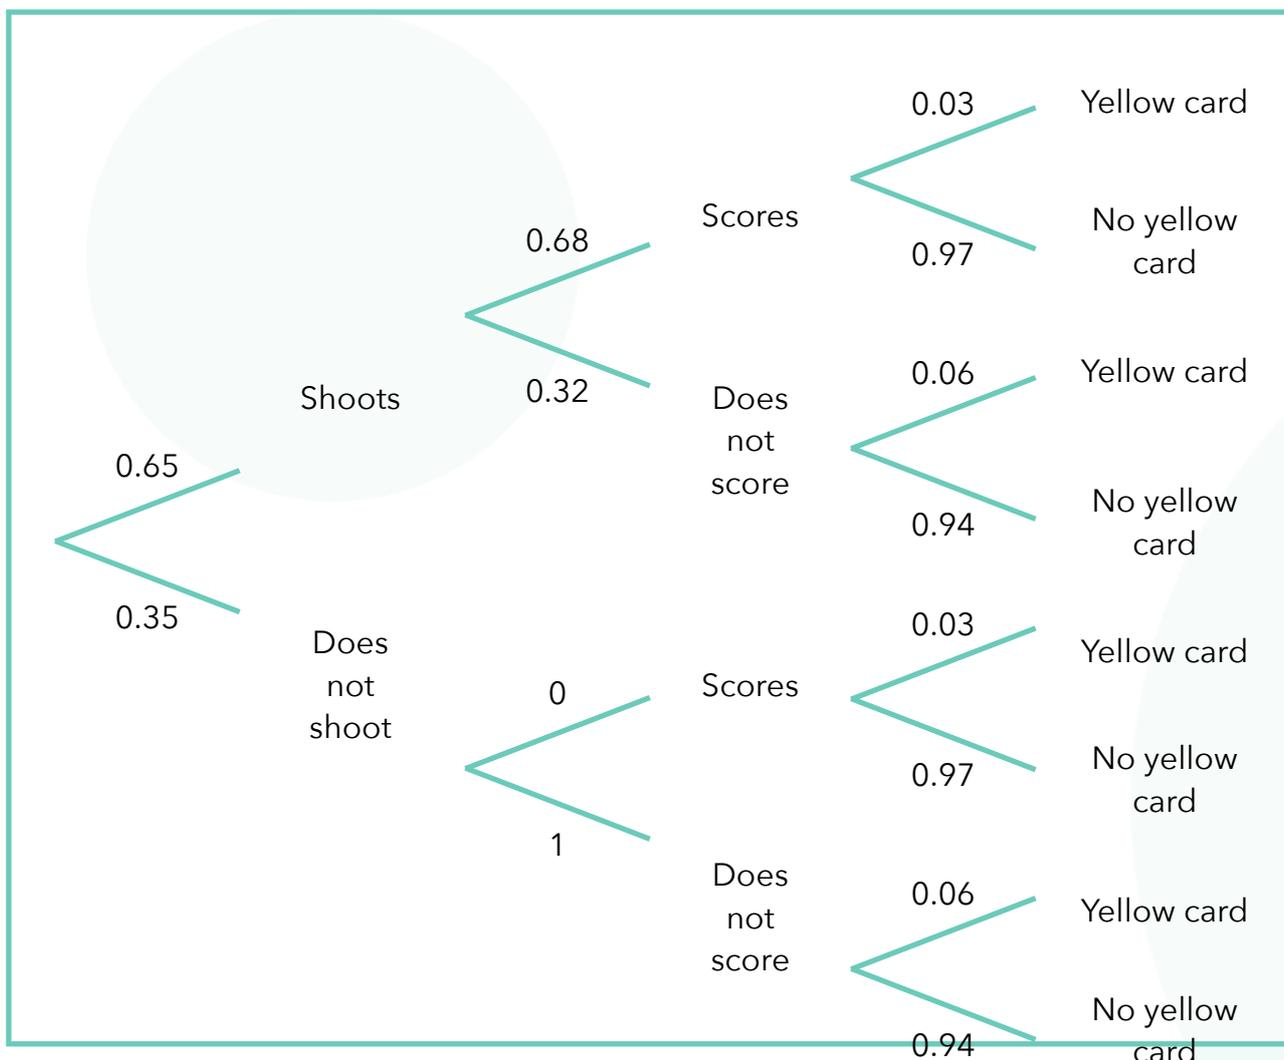

Lange = 6 cards in 36 matches
Weber = 2 cards in 22 matches
 $(6/36 \times 3) \times (2/22 \times 3) = 0.1364 = 13.64\%$

10. What is the probability that Lindsey Oakley gets three consecutive yellow cards over her next three games?

$((1/15) \times (1/15) \times (1/15)) = 1/3375 = 0.0296\%$

11. Create a tree diagram based on the statistics on Declan Fitzroy's player card as well as the following additional information:

- In any given game the probability that he shoots is 65%.
- Declan Fitzroy is twice as likely (compared to normal) to get a yellow card in games where he doesn't score.

- a. Given that Declan Fitzroy takes a shot, what is the probability that Declan Fitzroy **both** misses and gets a yellow card in a game?

$$\text{Does not score} = 7/22 = 0.32$$

$$\text{Gets a yellow card after not scoring} = ((1/34) \times 2) = 0.06$$

$$0.32 \times 0.06 = 0.0192 = 1.92\%$$

- b. Given that Declan Fitzroy takes at least one shot, what is the probability that Declan Fitzroy **either** scores or gets a yellow card in a game?

Probability that Fitzroy scores and does not get a yellow card

$$0.68 \times 0.97 = 0.6596$$

Probability that Fitzroy does not score and does get a yellow card

$$0.32 \times 0.06 = 0.0192$$

$$0.6596 + 0.0192 = 0.6788 = 67.88\%$$
