

12. Ratio, Proportions and Rates of Change

Planning a group holiday

Maeve and her friends have been saving up all year to go on holiday next summer. They now need to plan and budget to cover accommodation, activities and food. Maeve has taken responsibility over managing the holiday budget and has tasked the rest of the group to do the research for each area of the budget and bring her a shortlist of options to choose from.

Task one: Accommodation

Maeve and her four friends plan to go away for 12 nights arriving on Saturday 6th August and heading home on Thursday 18th August. One of her friends has brought her a short list of accommodation options in the area (see page 4).

1. What are some of the factors you might consider when choosing accommodation for a holiday?

2. What is the average price per room per night of staying in the hotel for the duration of their trip (exclude wifi)?

3. What would be the total cost to stay in each accommodation for the duration of the holiday (including any supplemental fees)?

4. Calculate the average cost per person per night and comment on how much they would each need to spend per day on food and drink for the all-inclusive resort to be better value than the B&B?

Task two: Food shopping

Maeve and her friends decide to do an online food shop before they go so that they have some essentials to see them through the first few days of the trip.

An extract from their shopping list is shown below, along with some options from a supermarket. For each item on the shopping list, calculate which option offers the best value and comment on whether this would be an appropriate purchase given they also want to minimise waste.

A large, empty rectangular box with a thin purple border, intended for students to write their calculations and comments for each item on the shopping list.

Accommodation options

Hotel	
Number of rooms needed	2
Price per room per night (Sunday - Thursday)	£77
Price per room per night (Friday and Saturdays)	£106
Wifi	£3.50 per room per day
