

# Enhancing data display and entry with Excel Form Control

John Tennent 13 November 2023

### John Tennent - Biography

John is a Chartered Accountant he started his career with Deloitte in 1983. He went onto to become the financial controller of a US bank before joining a training consultancy as Client Director. He co-founded Corporate Edge in 1996.

He is the Honorary Treasurer of the Air Ambulance Service and The London Marathon Foundation. Formerly Honorary Treasurer of Samaritans

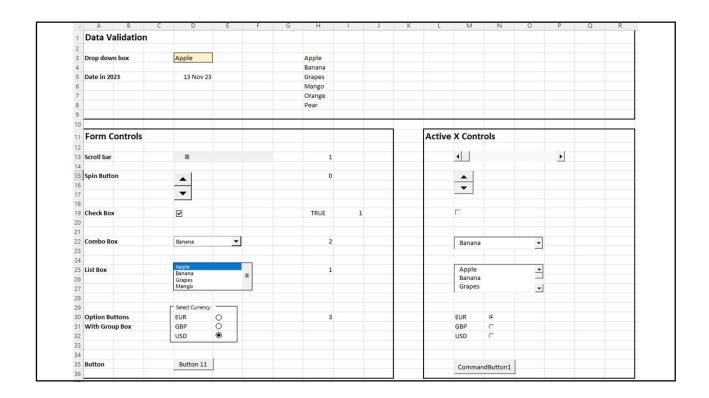

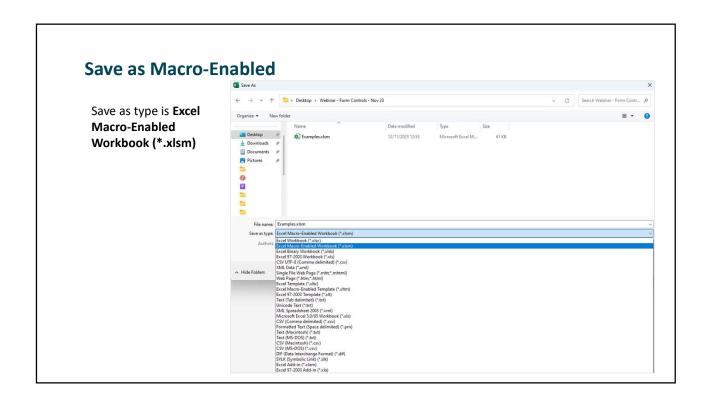

### Agenda

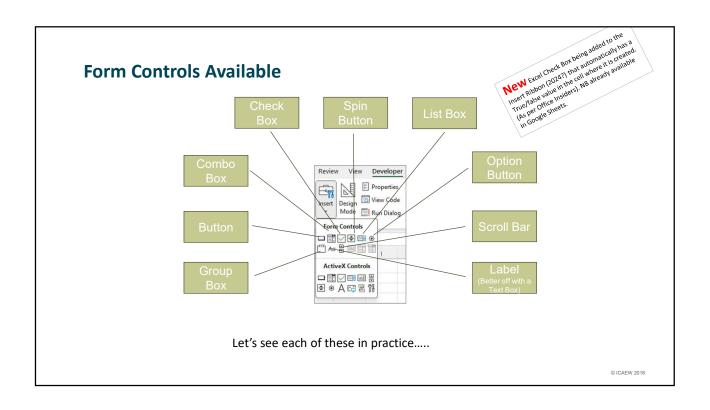

- 1. Entry options
  - Data Validation
  - Form Controls
  - ActiveX Controls
- 2. Data Validation
  - Drop down
  - Date entry
- 3. Form Controls
  - Developer Ribbon & Save as Macro-Enabled
  - · The controls available
- 4. Visual Basic
  - Why use VB?
  - · Options available

Make Spreadsheets more engaging, easier to enter data and remove the fear that users have of 'breaking it'

### **Developer Ribbon** Right click between ribbon tabs -Customize the Ribbon. Customise the Ribbon... Choose commands from: Data Popular Commands Main Tabs Proofing Add or Remove Filters All Chart Types... [Create Chart] Main Tabs > ☑ Background Removal Save Language |> > Home > Insert > Draw Accessibility Advanced > Page Layout > Formulas Customize Ribbon > Data Quick Access Toolbar Add-ins • > Code > Add-ins > Controls > XML Trust Center > Team New Tab New Group Rename... Customizations: Reset ~ 3 Import/Export ~ 3 Insert Picture OK Cancel

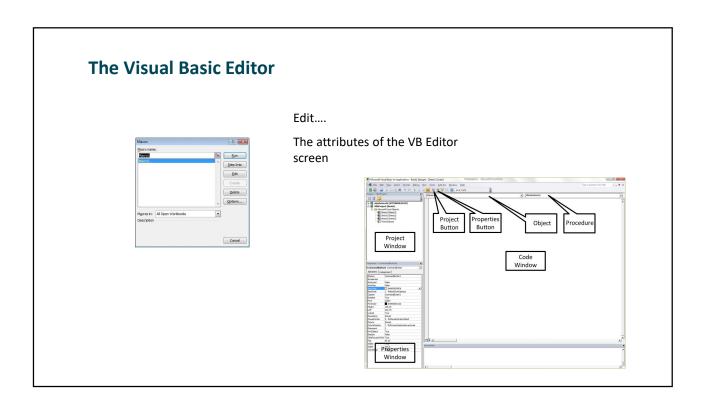

### **Advantages and Disadvantages of VBA**

Advantages	Disadvantages
Ability to automate any repetitive process (month end report printing)	A whole new language
Can add efficiency and reliability (e.g. copy across 12 columns)	Less widely known
Create your own custom Functions	Often poorly documented, making it difficult to follow the work of others
Has a 'follow me' macro feature to help get started	Can have cell alignment difficulties when rows and columns are added
Adds the forth dimension with loops (a set of goal seeks)	Errors in VBA code less easy to find than in Excel
Interact with other applications to pull/push data	
Create robust user interfaces (with Userforms and objects)	
Build entire applications	

# 

# Macros and 'Follow Me' Use 'Follow Me' to create code and learn syntax Set up a Macro to write the word 'Total' in a cell and link it to Ctrl + A Press 'Record' Change Name and add shortcut key You are now in 'Follow Me' Mode - Type 'Total' Press 'Stop'
